

TRANSFORM RECYCLED
RUBBER INTO FINISHED
PRODUCTS

METAMORPHOSIS II

Technical articles moulding plant

Metamorphosis II transforms recycled rubber granules or frayed rubber into superb shock proof flooring, residential and industrial flooring, flooring for livestock, or self-locking paving. Shapes and pavers are added by different shaped mold.

METAMORPHOSIS IV

Moulding plant

Metamorphosis IV transforms recycled rubber granules or frayed rubber into industrial wheels for trolleys and bins. Customized molds also produce articles for the urban, industrial and civil building industry, animal husbandry, etc.

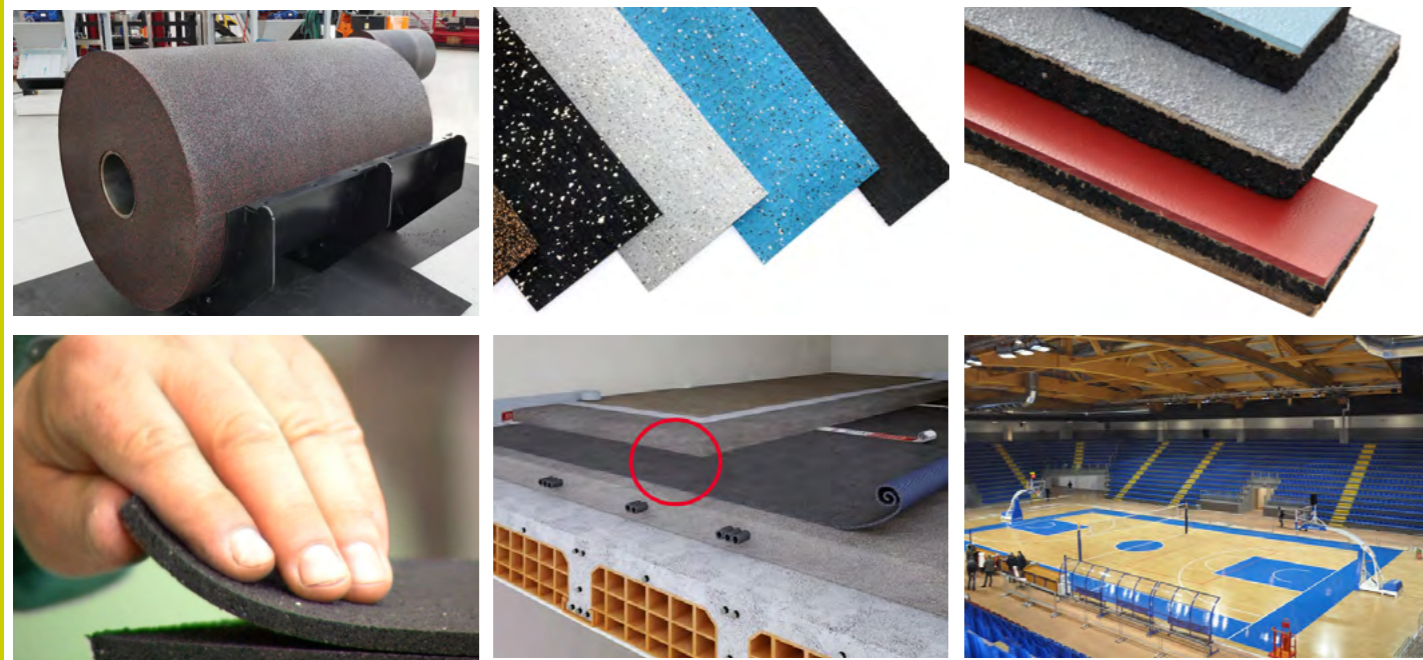

TITAN

Thermo-acoustic sheath production plant

Titan transforms recycled rubber granules or frayed material into sound-deadening and vibration damping sheaths of different densities, with thickness between 3 and 10 mm.

IRIS

Rubber granule and mulch painting plant

Iris transforms rubber granules or frayed rubber from recycled tires into decorative products for gardens, public parks, urban furniture and designing. Iris also produces colored granules for the infill of football fields with artificial turf.
